

DEQUAN

Visual Recognition for Faster Trading in the Trenches

Dequan is a ‘Deterministic Execution Queue for Unfiltered Asset Noise’ — a visual trading layer that turns memecoin chaos into fast, readable market movement.

1. The Reality

Everyone is looking at the same market.

Same tokens.

Same trades.

Same data.

Yet most traders lose and feel like:

“I got in right before it dumped.”

That’s not bad luck.

It’s timing.

And timing is really about **how fast you understand what you’re seeing.**

2. The Problem

Most tools don’t slow down data.

They slow you down.

To make a decision, you have to:

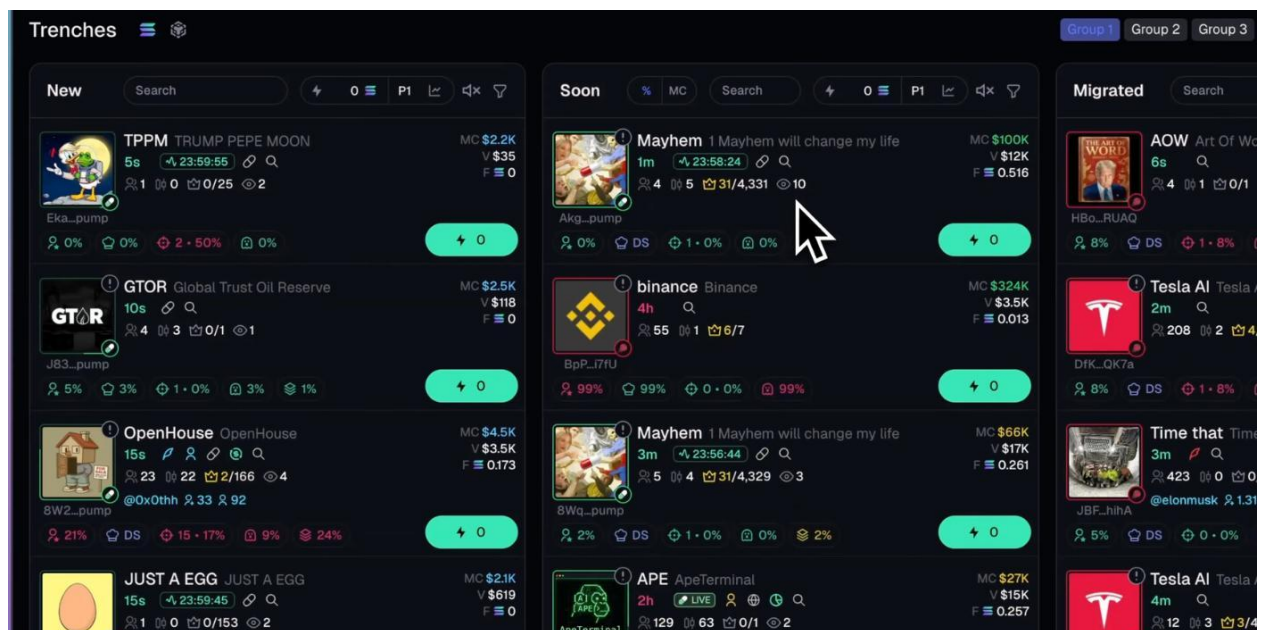

- Scan
- Read

- Compare
- Interpret

Each step adds delay.

And while you're thinking,
price is moving.

3. Traditional Terminals Provide Lists of Tokens

POOL	PRICE	AGE	TXN	5M	1H	6H	24H	VOL	LTO	MCAP/HLDR	FDV
1. Rizzmas/SOL Rizzmas	\$0.0001319	11 mths	366,810	1.06%	-6.11%	6.02%	310.9%	\$82.39M	\$1.54M	\$499.89	\$65.28M
2. GRINCH/SOL GRINCH	\$0.01223	7h	127,602	4.49%	6.8%	454.01%	12.48K%	\$40.56M	\$627.06K	\$482.71	\$11.75M
3. BABYBTC/SOL Baby BitCoin	\$0.001867	16d	5,740	0.05%	3.75%	19.32%	63.12%	\$1.05M	\$222.39K	\$303.18	\$1.85M
4. RIZZGUY/SOL Rizz Guy	\$0.003571	8h	127,061	3.94%	45.59%	454.21%	3,904.9%	\$25.67M	\$333.49K	\$186.39	\$3.58M
5. \$1/SOL just buy \$1 worth of this coin	\$0.04242	3d	158,080	-0.14%	10.35%	-6.83%	38.83%	\$76.21M	\$1.73M	\$653.37	\$42.39M
6. CHILLGUY/SOL Just a chill guy	\$0.5273	12d	55,476	0.19%	0.29%	-6.39%	-14%	\$71.27M	\$10.79M	\$3.64K	\$527.28M
7. JAK/SOL Jak	\$0.01803	1d	126,951	1.83%	-10.13%	50.34%	233.21%	\$45.48M	\$894.04K	\$661.50	\$17.72M
8. HABIBI/SOL HABIBI	\$0.009953	7 mths	3,172	0%	-1.32%	-11.56%	78.2%	\$1.62M	\$505.83K	\$696.86	\$9.9M
9. PURPE/SOL Purple Pepe	\$0.0001651	5 mths	42,222	0.06%	-7.92%	19.33%	-3.8%	\$16.66M	\$1.8M	\$1.38K	\$69.48M
10. HODL/SOL Just Diamond Hands	\$0.0009522	6h	48,687	1.67%	40.89%	746.46%	746.46%	\$4.31M	\$141.21K	\$325.10	\$976.85K

Most trading tools present data as lists.

Lists are efficient for displaying information —
but they are not optimized for **fast decisions**.

They require:

- Reading
- Interpreting
- Comparing

This creates friction between:

seeing something → understanding it → acting on it

4. Where Time Is Lost

The delay isn't in the data.
It's in the process.

Every extra step adds latency:

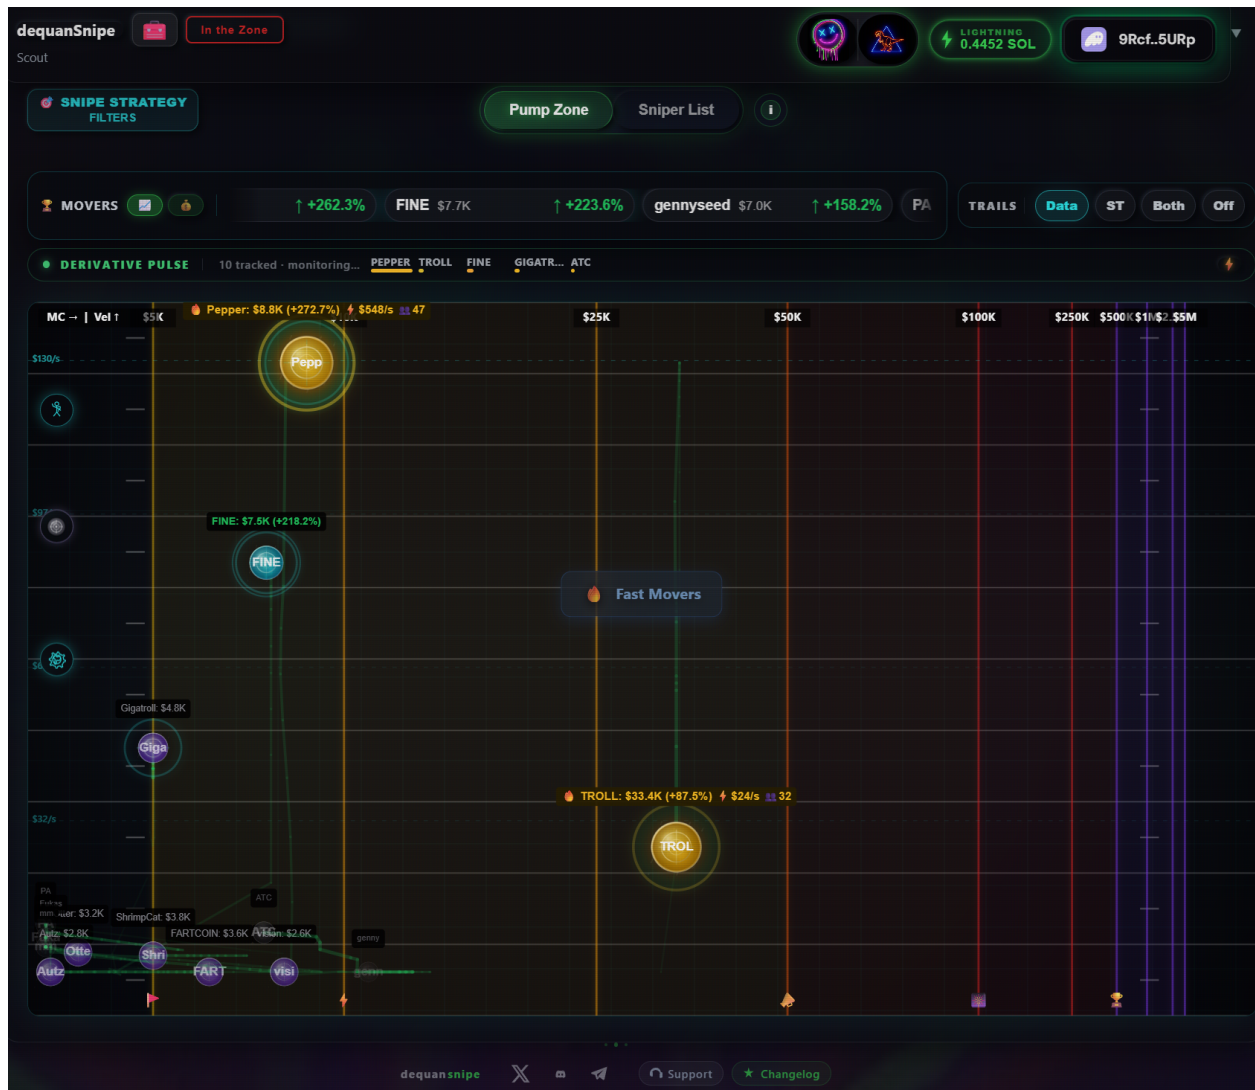

- reading
- thinking

- confirming

In fast markets, that latency matters.

5. How Dequan Changes That

Dequan's UI is engineered for how the brain processes patterns—fast, parallel, low load.

Instead of requiring you to read and interpret data, Dequan presents activity as **movement and spatial behavior**.

- Momentum is seen as motion

- Strength is seen as position
- Activity is seen as clustering

You don't have to:

- scan
- calculate
- compare

You **recognize and react**.

6. Why This Works

The brain processes visual patterns differently.

It detects motion, grouping, and anomalies almost instantly — before conscious thought.

Numbers don't work like that.

They must be:

- read
- compared
- held in memory

That creates cognitive load.

Dequan reduces that load — and speeds up reaction time.

7. Execution Still Matters

Understanding faster only matters if you can act on it.

Dequan is built to minimize delay between:

- recognition
- decision

- execution

Because in fast markets:

hesitation is more expensive than being wrong

8. What Dequan Is (Technically)

Dequan maps market data into a visual representation optimized for pre-attentive processing.

Motion, proximity, and clustering encode changes in activity, allowing the brain to detect patterns in parallel with minimal cognitive load.

This reduces reliance on sequential reading and working memory, shortening the path from perception to action.

Put simply, Dequan reduces the time between seeing something and acting on it.

9. Who This Is For

Dequan is built for traders who:

- make fast decisions, specifically when sniping new creations
- operate in low-cap environments
- enter and exit quickly
- value speed over confirmation

Not for:

- long-term investing
 - passive strategies
 - slow decision-making
-

10. What Changes

Dequan doesn't change the market.

It changes how fast you process it.

- Less thinking
- Faster reactions
- Better timing

In high-speed markets, that is the difference between winning and getting rekt.

11. Bottom Line

Everyone sees the same market.

The difference is how fast you understand it.

Dequan gives you that speed.
